DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, drawn to a method for manufacturing a semiconductor device including electrodes, a plurality of protrusion which protrude higher than the electrode and which are made of a resin in a predetermined pattern and conductive layer which are electrically connected to the electrode and which cover top surfaces of the protrusion, classified in class 438, subclass 725.
 - II. Claims 7-12, drawn to a semiconductor device, classified in class 257, subclass 750.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product invention II can be made by another and materially different process, for example, the protrusion made of a resist of a predetermined pattern of the product invention II can be formed by a lift off technique or selective deposition instead of removing the layer of resin using the patterned conductive layers as mask, and the conductive layers electrically connected to the

electrodes and covering top surfaces of the protrusions can be formed by selective deposition or lift-off technique instead patterning the conductive layers on the electrodes and the layer of resin in according with a predetermined patterned of protrusions.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
